

2014 Revised Pro Lite Tire Rule

Lucas Oil Off Road Racing Series has updated the allowable tire sizes for the 2014 Pro-Lite class. The rule change is simple and done with every effort to ensure cost containment for the future of the Pro Lite Class. The basis behind the proposed change is to update the allowed tires that are to be ran, the 265-75-16 size tire can be ran on the front or rear. Plus, a 31x10.5-15" size tire on either the front or rear. Either size can be ran or positioned in any corner of the truck.

The rule would limit the maximum size wheel that would be allowed to be a 16" Max Diameter wheel as to not drive the cost of bigger brakes and other mechanical changes.

Track width will remain at 74" wide. Track width measurements will be inspected as they have been at the MAXIMUM widest part of the tire. That means the "go-no-go" gauge would have to clear from top of tire to the ground at the bottom and not hang up at any point.

Sincerely,

Ritchie Lewis

Director: Lucas Oil Off Road Racing Series
